Analyze statement

CREDIT RISK SCORE

How we calculate the score

The analyzer produces a composite score from 0–1000 using six risk components. The assignment specifies the following dimensions, key metrics and weights.

Income Stability

25%

Monthly income by category, regularity, source diversity and growth trend.

Debt Service

20%

Identified EMI obligations, FOIR, EMI bounce rate and on-time payment rate.

Liquidity

15%

Average / minimum end-of-day balance and number of negative balance days.

Banking Behaviour

10%

Cheque / payment bounce count and charges, penalty fees and overdraft usage.

Fraud Indicators

15%

Statement integrity, circular transactions, overnight transactions and structuring patterns.

Expense Management

15%

Essential vs discretionary split, fixed vs variable ratio and month-on-month trends.

Bank statement analysis for demonstration purposes.

4 transactions

STEP 4

Inspect extracted transactions

Transactions are grouped by account. This view shows the extracted fields for the Individual account and the beginning of the Joint account, including dates, narration, debit/credit, balance, counterparty, payment channel, category, method and review status.

Extracted transactions

Why this transaction needs review

Counterparty identification

Confidence: 0.58 (58%)
Required threshold: 0.70 (70%)
The counterparty **ACME TECHNOLOGIES** could not be identified with enough confidence.

Review is triggered when classification or counterparty confidence falls below 70%.
